

Nsea is a premium boat manufacturer who combines leading global marine systems with nauti-craft suspension technology to create vessels that drastically improve safety, performance, and efficiencies.

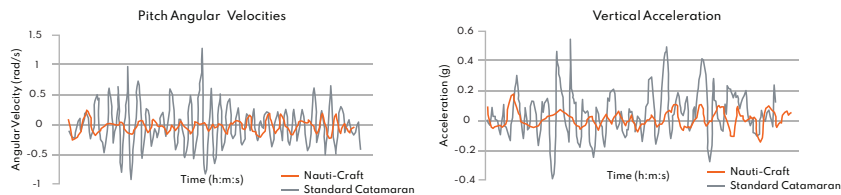

Marine Suspension

A World First

With a history hailing from Kinetic Suspensions, a ground-breaking suspension technology found in Toyota 4x4 LandCruisers, McLaren vehicles and more, nauti-craft technology has been eagerly anticipated in the marine landscape since the launch of its prototype vessel five years ago. Their patented marine suspension technology makes a significant impact on the operation of any nsea vessel, reducing the effects of slamming by up to 80% and enabling fully co-ordinated turns of up to 0.3G.

Why Marine Suspension

Improved Efficiencies & Safety

Achieve increased levels of productivity in the 1060 patrol boat, which can accomplish the job of vessels twice its size at a fraction of the capital outlay and operating costs.

The result is improved OHSE benefits including most notably fatigue reduction, meaning crew can manage and complete mission critical tasks more efficiently in a safer and more comfortable environment.
